

TENA®

1 in 3 of us  
is larger than life!

Many of us are a little larger than life however being excessively overweight can cause incontinence

67% of Australian adults and 30.9% of New Zealand adults are overweight or obese. Obese women have approximately double the risk of urinary incontinence.

Increased abdominal pressure can cause leakage when sneezing, coughing or laughing, and may contribute to a frequent or urgent need to urinate.

NEW
